The Watrous

Engine Works Company

Brantford

Canada

1899

Established over 45 years . . .

Brantford, Ont., Sept. 14, 1892.

The Watrous Engine Works Co.

City.

Dear Sirs,—In reply to your request as to how we are pleased with the 12818 Automatic Cut-off Engine which we purchased from your Company to run our Electric Light Plant, we take pleasure in stating that after three years' use we have no complaints to make, neither has it cost us anything for repairs during that time. The engine has given out a steady motion, which we believe is very important in running an electric light plant. We have thrown off the whole load 4000 lights instantaneously without any noticeable change in speed, and have thrown the load on again in the same manner with the same result. We believe the engine is designed to satisfy the most critical if given a fair chance, and have no hesitation in recommending its use for the above purpose.

Hereby you will meet with the success which you deserve, we are

Yours truly,

MASSEY-HARRIS CO., LTD.

Foodland Works, Ltd., 15, 17, 19, 21, 23, 25, 27, 29, 31, 33, 35, 37, 39, 41, 43, 45, 47, 49, 51, 53, 55, 57, 59, 61, 63, 65, 67, 69, 71, 73, 75, 77, 79, 81, 83, 85, 87, 89, 91, 93, 95, 97, 99, 101, BRANTFORD, ONT., SEPT. 19, 1892.

THE WATEROUS ENGINE WORKS CO.,
CITY.

INTRODUCTORY

THE Waterous High-Grade Automatic commands the attention of all requiring an economical power, especially for driving electric light plants, as it possesses those qualities most essential to a perfect light without the complicated adjustments so often found in automatic engines, and which are generally a source of great annoyance and expense.

Being a 4-valve cut-off engine, it is applicable to all places where economy in fuel is required, and being of moderately high speed—two or three times greater than the Corliss, and others of that type—it is economical in communicating its power, belting direct to high speed machinery.

Again, it is economical in first cost over the slower speed engines.

To anyone requiring an engine we are prepared to substantiate these claims by a full guarantee.

January 1st, 1892.

THE WATEROUS ENGINE WORKS CO.

THE WATEROUS ENGINE WORKS CO., LTD., BRANTFORD, CANADA.

DESCRIPTION OF ENGINE

② The "Waterous Automatic" is a self-contained, high speed, four-valve, automatic cut-off engine, having two distinct exhaust valves, placed on the under side of the cylinder, as near the ends or heads as possible, thus making the steam ports or passages very short and direct. These valves are worked by one eccentric, which is secured to the engine shaft, thus making their action under all conditions a positive one. These valves are of the circular type, operated by steel spindles passing through hardened steel bushes placed in heads of steam chests, so that no packing is here required.

The cut-off valves (which are of the piston type) are placed on the side of the cylinder immediately above the exhaust valves, each having double ports or steam passages, which, when opened, allow a full volume of steam to pass through them into the cylinder, until it is cut off, thus preventing any wire-drawing of the steam. These valves are operated by an eccentric attached to the governor, which completely regulates the point of cut off, and as they are entirely

Messrs. Waterous Engine Works Co.

Brantford, Ont.

Dear Sirs.—We received your letter of 17th asking how we were suited with the mill that you had put in for us, and asking for a statement of our mill results. We average 45 barrels in 24 hours, and we make out a bushel of wheat, 42 lbs of flour, 14 bran and 4 shorts, and we make the best grade of flour made in this country.

We are well satisfied with our mill machinery, and our engine is one of the best known in this part, and we will recommend it to anyone who is going to invest in steam power.

Yours truly

REID & NEBRITT.

R. Reid, prop.; R. C. Johnson, D. B. Nebbitt, Millers.

THE WATEROUS ENGINE WORKS CO., LTD., BRANTFORD, CANADA.

surrounded at all times by steam, they are counterbalanced, thus placing them under more easy control of the governor. Another advantage in arranging the valves in this manner is that when the steam has done its work in the cylinder, it is allowed to pass into the exhaust port under the valve, thus preventing any of the steam in the steam chest escaping, but retaining it until steam is again admitted into the cylinder.

As the governor is attached to the engine shaft, its effect upon the cut-off valves is always positive, and not liable to disarrangement, as is the case where belts are required to drive the governor.

All the wearing parts of the engine being made extremely large, and running in the best anti-friction metal boxes, they cannot give trouble from springing or getting out of line. The shaft, crank pin, piston-rod, valve-spindles and connecting rod are of steel. The main journals of the engine are finished with anti-friction metal liners, so arranged that they can be taken out at any time and replaced with new ones, also the boxes of the crank pin and cross head wrist are made in the same manner. The governor and eccentric are kept clear of accident by being entirely covered with a moveable case.

Dear Sirs.—We received your letter of 17th asking how we use a suited with the mill that was for us.

Bytheswood, Sept. 28th, 1892.

 Gentlemen.--The Automatic Engine we bought from you two years ago
 is giving us entire satisfaction, is easy to manage, and very economical on
 fuel.
 Yours truly,

EAIN BROS. MFG. CO., LTD.,
 John A. Bain, Vice-Pres.

THE WATEROUS ENGINE WORKS CO., LTD., BRANTFORD, CANADA.

WE COMMEND THE WATEROUS AUTOMATIC to your favorable notice on the following grounds:

It has Great Economy, while occupying much less space for the same power.

MODERATELY HIGH SPEED, meeting in this respect the single valve automatic engine, while giving great improvement over it in economy,

Economy in Communicating Power.

Owing to its speed it belts direct without the aid of counter shaft while using but moderate size pulleys and belts.

Economical in its use from the strength of its parts and its form.

General accessibility and convenience.

Security from derangement of shaft by reason of being entirely self-contained.

All its parts being carried by one massive frame casting.

Perfect action and safety of governor, its construction being such that it is impossible for the engine to "run away."

All oilers are stationary and positive.

Duplicate anti-friction liners for wearing parts.

Steel shafts and pins that are ground true (the only way to secure perfect journals) and are in correct proportion to bore and stroke of cylinder.

Perfectly balanced valves controlled by governor with positive connections with superior adjustment give this engine surprisingly smooth running qualities with freedom from friction and economy of lubricants.

In addition to the above named points, the "Waterous" Automatic is **ECONOMICAL IN FIRST COST**, and unsurpassed in the every day economy of fuel and maintenance.

Messrs. The Waterous Engine Works Co.,

Brantford, Ontario.

Harrietsville, Aug. 31st., 1902.

Gentlemen,—In answer to your enquiry of 31st Aug. as to what satisfaction our engine is giving, we would say we are very much pleased with it. We find it of ample power to do all that you claimed for it. It is very easy upon fuel, and it gives a very steady motion at all times; in fact, we may say that the entire mill runs well and gives good satisfaction.

Yours truly,

HATTON & JENKINS.

Gentlemen,—In answer to your enquiry of 31st Aug. as to what satisfaction our engine is giving, we would say we are very much pleased with it. We find it of ample power to do all that you claimed for it.

AUTOMATIC ISOCHRONOUS REGULATION

②. The Automatic Cut-off Governor

is simple in construction and perfect in its operation. It is the simplest regulating device extant. Adjusted in perfect equilibrium, it is truly an isochronous governor, and produces a regulation equal to any ever before realized. All its parts are in sight, and are readily accessible for cleaning. It is secured to the shaft and connects through eccentric on main shaft direct to valve without the use of gearing, pulleys, shafts, or belts. It is attached to the valve direct, and gives an open port at the beginning of each stroke, admitting steam to piston-head at full boiler pressure, and varies the point of cut-off, as the resistance requires from the beginning to three-fourths of each stroke. It acts instantly, and cuts off the steam at a point that will just do the work and maintain the fixed speed of engine. The speed remains constant, regardless of the change of load or variation of steam pressure in boiler. The speed of the engine may be changed to suit requirements by shifting the weight.

THE WATEROUS ENGINE WORKS CO., LT'D., BRANTFORD, CANADA.

 **The Waterous Automatic Tandem
Compound Engine** built on the same substantial design as
the single cylinder engine—with or without condenser.

We supply this engine to our customers under full guarantee as to economy, durability and great ease of management, with perfect regulation.

We shall be pleased to correspond with those requiring an economical, durable power.
